

Clinical Evidence

Q. Can we prove the effectiveness on how our products work?

A. As a company we provide clinical evidence to back up all our products, such as PRI graphs to represent how they work and to correlate with the good clinical outcomes, which is supported in the Clinical Evidence – Optimising and Measuring Clinical Outcomes Brochure (Lit 444/04). Most companies do not produce clinical evidence, many do not even have a clinical function, and others produce evidence of low quality.

These FAQ's have been developed to answer common questions which arise during clinical practice and in the market place when clinical evidence is scarce. It is important to consider the holistic care of the patient and use clinical judgement making decisions based on the answers. If you cannot find an answer for which you are looking, please email karen.milton@arjohuntleigh.com with your question(s) and we will endeavour to answer it/them and make it/them available to help educate others.
